- Dated: September 26, 2003
- (Currently Amended) An isolated protein produced by a method comprising:
 culturing a host cell into which has been introduced a DNA expression vector comprising the following operably linked elements:
 - a transcription promoter;
 - a DNA segment comprising consisting of a nucleotide sequence shown in SEQ ID

NO: 1 from nucleotide 76 to nucleotide 417; and

a transcription terminator, wherein said host cell expresses the polypeptide encoded by said DNA segment; and

recovering said protein.

- 2. The protein of claim 1, wherein the host cell is a mammalian cell.
- 3. The protein of claim 1, wherein the host cell has had a second DNA vector introduced into it, wherein said second expression vector comprises the following operably linked elements:

a transcription promoter;

Sub >

a DNA segment encoding an endoprotease; and

a transcription terminator,

wherein said host cell expresses the polypeptide encoded by the DNA segment comprising a nucleotide sequence shown in SEQ ID NO: 1 from nucleotide 76 to nucleotide 417; and said DNA segment encoding said endoprotease.

Claims 4 and 5 (cancelled).

BEB Claims 6-15 (withdrawn). concerled
